

20MCA243 – MOBILE APPLICATION DEVELOPMENT

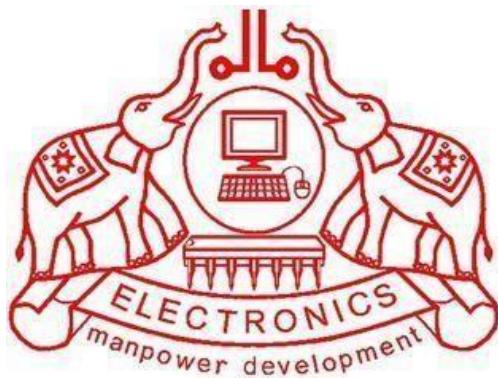

LABORATORY RECORD

*Submitted in partial fulfilment of the requirements for the award of
Masters of Computer Applications*

At

COLLEGE OF ENGINEERING POONJAR

Managed by I.H.R.D., A Govt. of Kerala undertaking
(Affiliated to APJ Abdul Kalam Technological University)

SUBMITTED BY
JEETHU DANIEL(PJR24MCA-2009)

Department of Computer Science
COLLEGE OF ENGINEERING POONJAR

COLLEGE OF ENGINEERING POONJAR

Managed by I.H.R.D., A Govt. of Kerala undertaking

(Affiliated to APJ Abdul Kalam Technological University)

CERTIFICATE

Certified that this is a Bonafide record of practical work done in Mobile Application Development Lab (20MCA243) Laboratory by **JEETHU DANIEL** Reg No. **PJR24MCA-2009** of College of Engineering, Poonjar during the academic year 2024- 2026.

Dr. Annie Julie Joseph
Head of the Department

Aparna A Nair
Assistant Professor

Submitted to the University Examination held on:

INTERNAL EXAMINER

EXTERNAL EXAMINER

INDEX

No.	List of Programs	Date	Pg no.
1	To implement a program to Toast a message hello world on a button click.	18/07/2025	1
2	To design login page in android studio	01/08/2025	3
3	Write a program that demonstrates Activity Lifecycle.	08/08/2025	6
4	To create a calculator application in android studio	22/08/2025	9
5	To create an android application to understand passing data between activities using intent.	12/09/2025	16
6	Design a registration activity and store registration details in local memory of phone using Intents and Shared Preferences	19/09/2025	21
7	Create a Facebook page using RelativeLayout; set properties using .xml file	26/09/2025	25
8	Develop an application that toggles image using FrameLayout	10/10/2025	31
9	Develop an android mobile application to illustrate the usage of alert dialogue	17/10/2025	34
10	Develop an application using array adapter with List view	24/10/2025	37
11	Create database using SQLite and perform INSERT and SELECT	25/10/2025	40

Experiment No. 1

Aim: To implement a program to Toast a message hello world on a button click.

Procedure:

activity_main.xml

```
<?xml version="1.0" encoding="utf-8"?>
<androidx.constraintlayout.widget.ConstraintLayout
    xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:app="http://schemas.android.com/apk/res-auto"
    xmlns:tools="http://schemas.android.com/tools"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    tools:context=".MainActivity">

    <TextView
        android:layout_width="match_parent"
        android:layout_height="match_parent"
        android:text="Activity Life Cycle"
        android:textAlignment="center"
        android:layout_marginTop="50dp"
        android:textSize="30dp"/>
</androidx.constraintlayout.widget.ConstraintLayout>
```

MainActivity.java

```
package com.example.toastydemo;

import androidx.appcompat.app.AppCompatActivity;
import android.os.Bundle;
import android.view.View;
import android.widget.Button;
import android.widget.Toast;

public class MainActivity extends AppCompatActivity {

    Button btnToast;

    @Override
    protected void onCreate(Bundle savedInstanceState) {
```

```
super.onCreate(savedInstanceState);
setContentView(R.layout.activity_main);
btnToast = findViewById(R.id.btnToast);

btnToast.setOnClickListener(new View.OnClickListener() {
    @Override
    public void onClick(View view) {
        Toast.makeText(MainActivity.this, "HelloWorld",
        Toast.LENGTH_LONG).show();
    }
})
```

Output:

RESULT:

The program is executed and output is successfully obtained.

Experiment No. 2

Aim: To design login page in android studio

Procedure:

activity_main.xml

```
<?xml version="1.0" encoding="utf-8"?>
<LinearLayout xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:app="http://schemas.android.com/apk/res-auto"
    xmlns:tools="http://schemas.android.com/tools"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    android:orientation="vertical"
    android:padding="20dp"
    android:background="@color/white"
    tools:context=".MainActivity">

    <EditText
        android:id="@+id/etEmail"
        android:layout_width="wrap_content"
        android:layout_height="wrap_content"
        android:layout_margin="20dp"
        android:ems="110"
        android:hint="enteremail"
        android:inputType="text"/>

    <EditText
        android:id="@+id/etpassword"
        android:layout_margin="20dp"
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:ems="10"
        android:hint="Enterpassword"
        android:inputType="text"/>

    <Button
        android:id="@+id/btLogin"
        android:layout_margin="20dp"
```

```

        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:text="Login"/>
    </LinearLayout>

MainActivity.java

package com.example.loginpage;

import android.os.Bundle;
import android.widget.Button;
import android.widget.EditText;
import android.widget.Toast;
import android.view.View;

import androidx.appcompat.app.AppCompatActivity;

public class MainActivity extends AppCompatActivity {

    EditText etEmail, etPassword;
    Button btLogin;

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);

        // Initialize UI components
        btLogin = findViewById(R.id.btLogin);
        etEmail = findViewById(R.id.etEmail);
        etPassword = findViewById(R.id.etPassword);

        // Set up login button click listener
        btLogin.setOnClickListener(new View.OnClickListener() {
            @Override
            public void onClick(View v) {
                String email = etEmail.getText().toString().trim();
                String password = etPassword.getText().toString().trim();

                if(email.equals("admin@gmail.com") && password.equals("admin123")) {
                    Toast.makeText(MainActivity.this, "Login Success",

```

```
Toast.LENGTH_SHORT).show();
    } else {
        Toast.makeText(MainActivity.this, "Login Failed",
        Toast.LENGTH_SHORT).show();
    }
}
});  
}  
}
```

Output:

RESULT:

The program is executed and output is successfully obtained.

Experiment No. 3

Aim: Write a program that demonstrates Activity Lifecycle.

Procedure:

activity_main.xml

```
<?xml version="1.0" encoding="utf-8"?>
<androidx.constraintlayout.widget.ConstraintLayout
    xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:app="http://schemas.android.com/apk/res-auto"
    xmlns:tools="http://schemas.android.com/tools"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    tools:context=".MainActivity">

    <TextView
        android:layout_width="match_parent"
        android:layout_height="match_parent"
        android:text="Activity Life Cycle"
        android:textAlignment="center"
        android:layout_marginTop="50dp"
        android:textSize="30dp"/>
</androidx.constraintlayout.widget.ConstraintLayout>
```

MainActivity.java

```
package com.example.cycle;

import androidx.appcompat.app.AppCompatActivity;
import android.os.Bundle;
import android.widget.Toast;

public class MainActivity extends AppCompatActivity {

    @Override
    protected void onCreate(Bundle savedInstanceState) {
        super.onCreate(savedInstanceState);
        setContentView(R.layout.activity_main);
        showToast("Activity Created");
    }
}
```

```
protected void onStart() {
    super.onStart();
    showToast("Activity Started");
}

protected void onResume() {
    super.onResume();
    showToast("Activity Resumed");
}

protected void onPause() {
    super.onPause();
    showToast("Activity Paused");
}

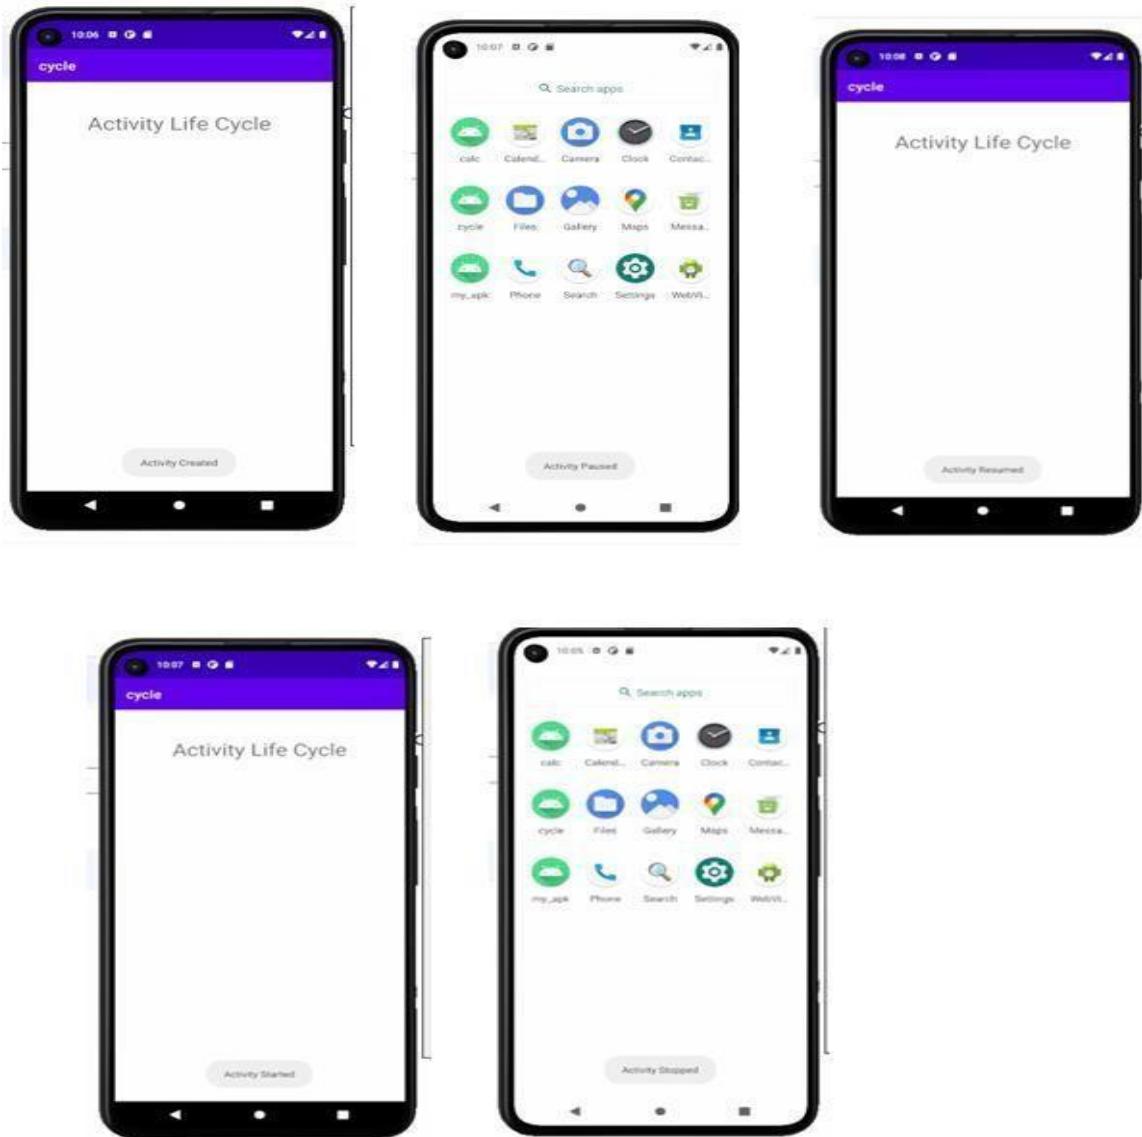

protected void onStop() {
    super.onStop();
    showToast("Activity Stopped");
}

protected void onRestart() {
    super.onRestart();
    showToast("Activity Restarted");
}

@Override
protected void onDestroy() {
    super.onDestroy();
    showToast("Activity Destroyed");
}

// Helper method to display toast messages
private void showToast(String message) {
    Toast.makeText(this, message, Toast.LENGTH_LONG).show();
}
```

Output:

RESULT:

The program is executed and output is successfully obtained.

Experiment No. 4

Aim: To create a calculator application in android studio.

Procedure:

activity_main.xml

```
<?xml version="1.0" encoding="utf-8"?>
<androidx.constraintlayout.widget.ConstraintLayout
    xmlns:android="http://schemas.android.com/apk/res/android"
    xmlns:app="http://schemas.android.com/apk/res-auto"
    xmlns:tools="http://schemas.android.com/tools"
    android:layout_width="match_parent"
    android:layout_height="match_parent"
    android:padding="16dp"
    tools:context=".MainActivity">

    <EditText
        android:id="@+id/num1EditText"
        android:layout_width="0dp"
        android:layout_height="48dp"
